The Greater Manchester Moving ‘Approach to Transformational Change’

The Approach to Transformational Change has been adapted from the Population Health Plan Commissioning Cycle, and will be used to guide and support all of the work under Greater Manchester Moving. This will ensure that the principles that underpin this whole system approach, with people and behaviour change at its heart, are lived out in policy and practice.

1> The case for change

Establish the case for change (high level problem, current outcomes). Take time to understand what is already working well. Learn from this.

2> Scale of potential impact

Risk stratification of whole population, identification of priority cohorts

3> Examine the evidence, data and insight

Where are the priority cohorts? What are the individual, social, environmental and policy factors that are influencing behaviours? What works to engage them? What do we know and understand about their lives, fears, barriers to change? What don’t we know? How can we find out?

4> Engage across sector/across the system and with priority cohorts

Start from an appreciative standpoint. Then explore the issue, question or challenge and co-design system change and solutions. Consider skills and workforce development.

5> Pilot system change or investment

Decision made on system change or investment required, enabling transformation or creation of system, service or approach. Typically start on a pilot basis – mainstreaming following successful pilot or trial

6> Implementation at scale

Agree plan for roll out, including options to test new models at a smaller scale and anticipated approach to scaling up across Greater Manchester appropriate to local need and assets

7> Final evaluation

Evaluate from the outset, including process, outputs, outcomes and savings. Final evaluation should be used to help refine delivery models, driving continuous improvement

8> Mainstream investment or decommissioning

Agreement on ongoing investment to support mainstreaming (for example, funding commitments/resource allocation to support system change)
