

The use of AI to write job applications

Greater Manchester Moving read every application received and we do not use AI in our decision making. We understand you may want to use AI to help draft your application, but over-reliance is often noticeable, and, in many cases, will not give you the best chance of success. Generic, AI-heavy responses tend to lack your authentic voice and individuality.

Below are some things to consider when using AI in applications:

Avoid generic responses

GM Moving wants to understand you and your unique skills and knowledge. AI written applications often sound similar, making it harder for us to get to know you. If you use AI for drafting or proofreading, please tailor your response to reflect your own voice and experience.

Look out for AI inaccuracies

AI can produce inaccuracies that may weaken your application. Use your own knowledge and experience and share examples from your work history.

Consider the impact on the environment

AI has an environmental impact due to high energy use, carbon emissions, water consumption, and hardware production. Therefore, we encourage you to be mindful of the environmental cost of using AI.
